

The flattest faces are specified with the arrows

CataTower — Rules of the Game

Welcome to **CataTower**, the game where every block you place can be a triumph... or the beginning of the end! Build the tower higher and higher, take bold risks, unleash devastating effects—but above all... don't be the one who makes it fall.

Objective of the Game

Your mission: **stack pieces onto the tower without making it collapse**. Each block placed earns you points. The first player to **reach exactly 18 points** wins the game. But beware: if you go over 18, your score is **cut in half**! In CataTower, you must be daring—without getting greedy.

Game Components

- 31 building blocks:
 -  **Green**: simple and stable
 -  **Blue**: trickier to place
 -  **Red**: for the brave
 -  **White**: the Effect pieces
 -  **The Unique Grey piece**: the explosive finale
- A deck of 17 **Effect cards** and 22 **Malus cards**
- A score sheet to track player progress
- A six-sided die
- The game box (one half serves as the tower's base, the other as the piece reserve)

Setup

1. All players start at **0 points**.
2. Place the blocks in one half of the box. The other half goes in the center as **the base of the tower**. The **first player** decides how to position the base and places the very first block on it.
3. Play proceeds **clockwise**.

Taking Your Turn

On your turn:

1. **Roll the dice.** If it lands on the “M” face, **draw a Malus card and apply it immediately.**
2. Choose any remaining block.
3. **Place it on the tower,** at least as high as the lowest block already placed.
4. If the block is placed successfully:
 -  Green: +1 point
 -  Blue: +2 points
 -  Red: +5 points
 -  Effect block: **draw an Effect card** (keep it secret). Play it at any time, or **before** placing your block if it applies.

Important Rules

- Placing a block **on its flattest face** (see diagram at the end) scores 0 points. For Effect blocks, you also skip drawing a card.
- All blocks placed directly on the base score 0 points.
- Effect blocks cannot be the first block placed on the base.
- **Only one tower can exist.** Every block must contribute to the same structure.
- On the very first round, only Green blocks may be played (for 3 players or fewer, this applies to the first 2 rounds).

When the Tower Shakes...

If blocks fall:

- **Less than half the tower** falls (including the one you just placed):
 - You lose **1 point per fallen block.**
 - The round continues. Fallen blocks return to the reserve. Your next turn starts with the current tower state.
- **Half or more of the tower** falls (or the whole thing):
 - You lose **1 point per fallen block.**
 - **The round ends immediately.** All blocks go back to the reserve. **Malus cards are discarded, but Effect cards stay in play.**
 - You reset the base however you like and place the first block of the new round (which never scores points).

 Scores can never go below 0.

The Unique Grey Piece

When all green, blue, red, and white blocks are gone, only **the Unique Grey piece** remains:

- If placed successfully, **all other players lose 10 points.** The player who placed it starts the next round.
- If the tower collapses, the player loses points as usual (1 per fallen block).

Effect & Malus Cards

- Effect and Malus cards create surprises, twists, and sabotage opportunities!
- A player may hold **a maximum of 2 Effect cards.**
- If you draw a third, you must play one immediately.

End of the Game

The game continues across rounds until a player reaches **exactly 18 points.** That player is crowned **Master of the Tower!**

 If a player overshoots 18, their score is halved and the game goes on.

Bonus Rule (Expert Mode)

In “+ Mode,” players agree on a time limit (e.g., 5 seconds) to place their block. If they fail to meet the limit, they draw a Malus.

 **Now it's your turn... may the Tower be ever in your favor!**
